

Forest Change Detection Update – July 2003

The change detection process has been completed for half of the Ozark Highlands subsection, which includes the Mark Twain National Forest in Missouri and the Ozark National Forest and Ouachita National Forest in Arkansas. The remainder of the Ozark Highlands subsection is currently being processed. In the near future ground truthing will be performed to determine the accuracy of the change detection results.

Change Detection results using Landsat Band 7 and Landsat Tasseled Cap,
