

Missouri NHD Current Status - Updated May 2004

UPDATE! NHD subbasin data is now available for distribution in **NHDinGeo** format.

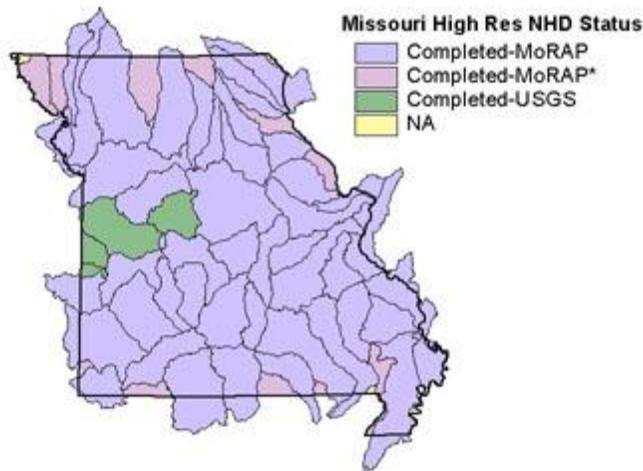

NHDinArc datasets can still be downloaded at ftp://nhdftp.usgs.gov/FOD_Data/

The new **NHDinGeo** datasets can be downloaded through the new NHD Viewer at <http://nhdgeo.usgs.gov/viewer.htm>.

For information on the new data format and the NHD program go to <http://nhd.usgs.gov/index.html>

As of January 2003, all 50 subbasins (formerly called catalog units) being processed as NHD products by MoRAP and USGS have been processed through Pre Conflation, Conflation, Post Conflation, and QAQC.

There are 10 subbasins that fall in part within Missouri that have not been processed as full NHD products (11010001, 11010009, 08020203, 11070206, 1028012, 07110004, 10240005, 10240010, 10280201, 11010010). These subbasins have, however, been processed through Pre Conflation for that portion that lies within Missouri. If you are interested in minimally attributed arcs (streams) and polygons (waterbodies) for these subbasins, please contact Robbyn Abbitt (email address below).

- **Completed - MoRAP** = All processing phases occurred at MoRAP
- **Completed - MoRAP*** = Subbasin only processed through Pre Conflation for that portion within Missouri

- **Completed - USGS** = All processing phases occurred at Mid Continent Mapping Center (USGS)
- **NA** = These subbasins have not yet been addressed by MoRAP or USGS
